

My iNote — APK User Guide

Welcome to **My iNote**, a sleek, dark-mode notes app powered by Firebase, with built-in AI features through OpenRouter. This guide walks you through installing the APK, subscribing, and using every feature.

1. Download the APK

1. Open a browser on your Android phone.
2. Visit the official site: <https://mahadi-release.ruetandroiddevelopers.com/My-iNote/>
3. Tap the **Download APK** button.
4. If Chrome warns *"This type of file can harm your device"*, tap **Download anyway**. This warning appears for any APK downloaded outside the Play Store.

Direct download link: https://mahadi-release.ruetandroiddevelopers.com/My-iNote/My-iNote_v1.0.apk

2. Install the APK

Since the app isn't coming from the Play Store, Android needs one-time permission to install from your browser.

A. Allow installation from this source

1. Open the downloaded file (from the notification or your *Downloads* folder).
2. The system will show: *"For your security, your phone is not allowed to install unknown apps from this source."*
3. Tap **Settings**.
4. Toggle **Allow from this source** to **ON**.
5. Tap the back arrow ← to return.

B. Install

1. Tap **Install**.
2. Wait a few seconds.
3. Tap **Open** to launch My iNote.

Tip: If installation fails, make sure your phone runs **Android 6.0 (Marshmallow)** or newer. The APK targets `minSdk 23`.

3. Subscribe (login)

My iNote is a bdapps-powered service. A small subscription is required to verify your number.

[!IMPORTANT] **Subscription charge: 2.78 BDT** (VAT + SC + SD included). **For Robi and Airtel users only.**

New users

1. Open the app — you land on the **Login / Subscribe** screen.
2. Enter your **Robi** or **Airtel** mobile number.
3. Tap **Subscribe / Login**.
4. You receive a **6-digit OTP** via SMS.
5. Type the OTP into the app.
6. Enter your **name** to finish profile setup.

Returning users

1. Open the app.
2. Enter the same subscribed mobile number.
3. Tap **Subscribe / Login**.
4. You're back in — your notes are exactly where you left them.

4. Using the notes

The home screen shows all your notes in a swipeable, glass-card list.

Action	How
Create a note	Tap the + floating button
Open / edit a note	Tap the card
Delete a note	Swipe the card right → left
Search	Use the search bar at the top
Profile & settings	Tap the person icon in the top-right

Notes sync in real time with Firestore. Whatever you write on your phone shows up immediately on the web version at the same site.

5. AI features (optional)

My iNote ships with five AI features powered by **OpenRouter**. They are **off by default** — you choose whether to enable them.

5.1 Set up your API key

1. Tap the **person icon** (top-right of the notes list).
2. Tap **AI Settings**.
3. Paste your OpenRouter key (get one at openrouter.ai → *Keys*).
4. Tap **Save**.

Your key is stored on the device using Android's EncryptedSharedPreferences. It is never sent to My iNote servers.

Want to skip OpenRouter entirely? Set the **Proxy base URL** to your own backend. Then everyone uses your server's key, not their own.

5.2 The five features

Feature	Where	What it does
Chat with note	AI menu (in editor)	Stream a conversation constrained to the current note's content
Task extractor	AI menu (in editor)	Pulls actionable tasks out of the note with priorities (Low / Medium / High)
Brainstorm	AI menu (in editor)	Generates grouped ideas for the note, rendered as Markdown
Continue writing	Editor toolbar	Streams text right at your cursor while you type, matching the note's tone
Semantic search	Search bar on notes list	Embeds your query and every note, ranks by similarity, shows % match badges

To access the first three, open a note, tap the **sparkles icon** (🔮) in the app bar.

6. Logging out vs. unsubscribing

Open **Profile** from the home screen.

- **Logout** — clears the local session on this device. Your **bdapps subscription stays active**, so you can log back in on the same number and pick up where you left off.
- **Unsubscribe** — cancels the bdapps subscription itself. You will be logged out and need to resubscribe to use My iNote again.

[!TIP] Switching to a new phone? Tap **Logout** on the old one, then **Subscribe / Login** on the new one with the same number — your notes follow you.

7. Troubleshooting

"App not installed"

- An older copy may still be installed. Uninstall My iNote from *Settings* → *Apps*, then re-install.

"Couldn't send OTP"

- Confirm you're using a **Robi** or **Airtel** SIM.
- Make sure you have SMS reception and at least 2.78 BDT balance.
- Wait 60 seconds and try again — the OTP endpoint rate-limits.

"Invalid API key" / "401 Unauthorized" (AI features)

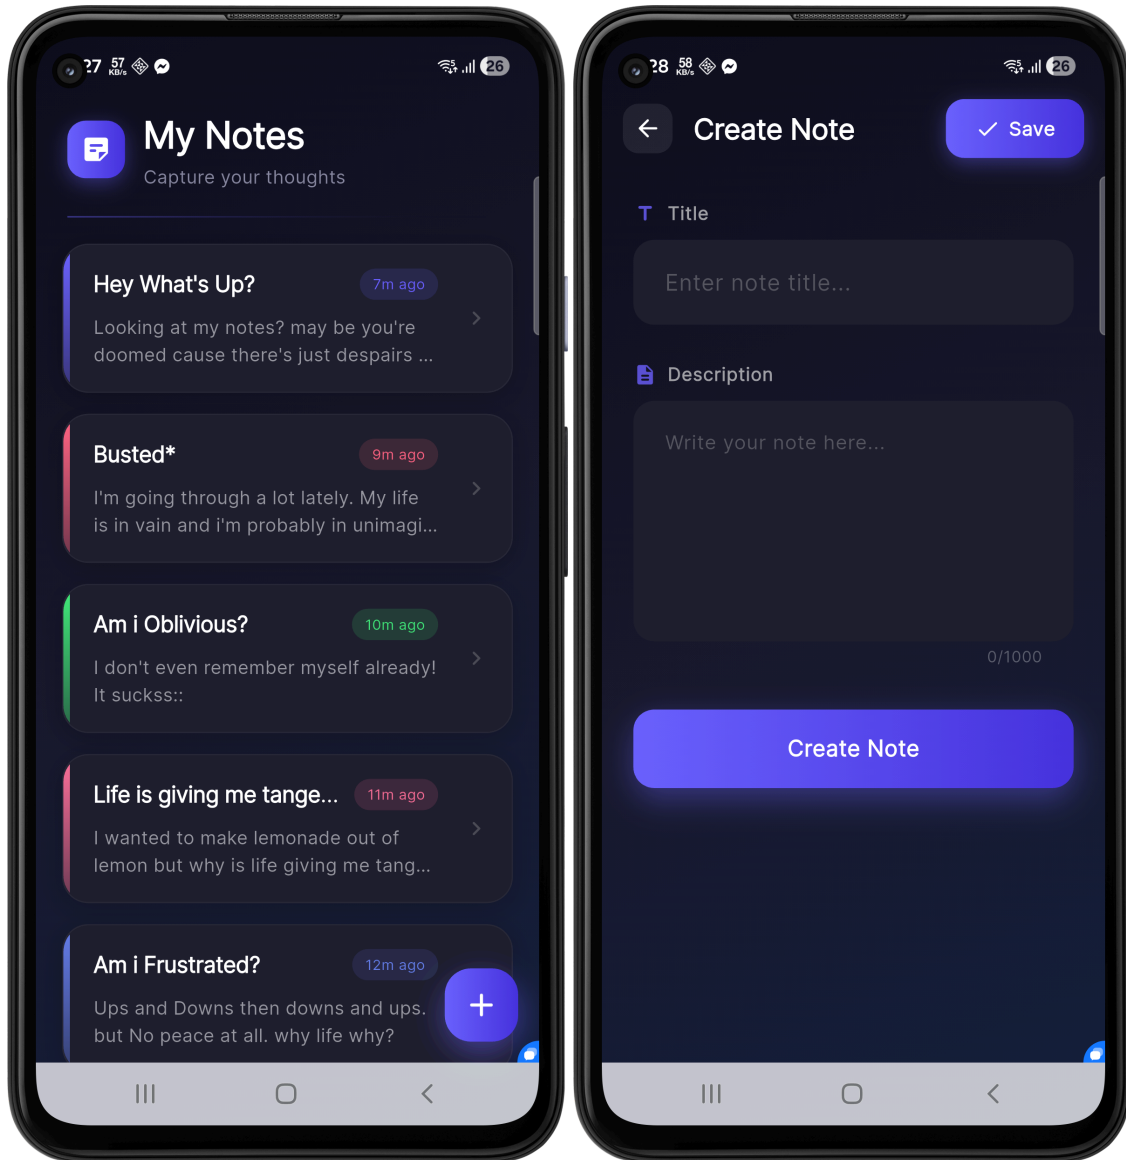

- Open **Profile** → **AI Settings**, paste the key again, and tap **Save**.

- Confirm the key starts with **sk-or-v1-** on openrouter.ai.

Semantic search returns nothing

- The app only ranks notes that already have an embedding stored. Save the note once (or edit it) — the embedding is generated automatically on save.

8. Screenshots

Enjoy writing with My iNote ✨
